Problem Statement

A woman dies every two minutes due to pregnancy or childbirth: UN agencies

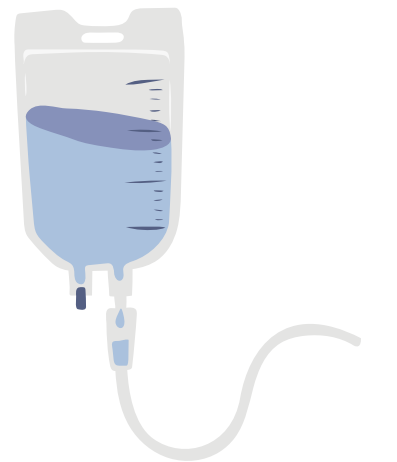

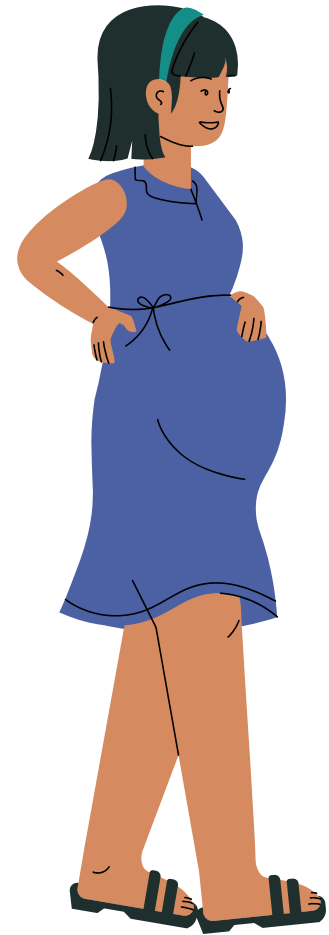

New data show major setbacks for maternal health in many parts of the world, highlighting stark disparities in healthcare access

23 February 2023 | News release | Geneva/New York/Washington | Reading time: 5 min (1269 words)

In 2020, about 70% of all maternal deaths were in sub-Saharan Africa, facing severe humanitarian crises, maternal mortality rates were more than double the world average (551 maternal deaths per 100 000 live births, compared to 223 globally).

The report shows that over 4.5 million women and babies die every year during pregnancy, childbirth or the first weeks after birth - equivalent to 1 death happening every 7 seconds - mostly from preventable or treatable causes if proper care was available.

Based on current trends, more than 60 countries are not set to meet the maternal, newborn and stillborn mortality reduction targets in the UN Sustainable Development Goals by 2030.
